Retail - the second most targeted industry.

Are you prepared?

According to Verizon's 2013 Data Breach Investigations Report, 24% of confirmed data breaches are found in retail and restaurants - second only to finance. The lack of risk identification and awareness, specifically in the information technology space, is costing retailers millions in lost revenue, lost reputation, and fines. Risks arise primarily from susceptibility to a breach, lack of compliance, and a weak security strategy. Essextec can evaluate multiple risk factors, from external or internal influences to regulatory governance to something as detailed as application security.

In a recent industry poll, close to 40% of respondents had difficulty answering questions around cyber risk such as:

> How do you identify risk?
> What is your data classification and protection policy?
> Are you in compliance with regulatory and state programs?
> Are you relying only on your financial audits as your "gold standard"?
> How do you secure your enterprise and/or applications?

Now, more than ever, it is necessary to increase your awareness of the vast regulatory environment revolving around due care and due diligence. Sarbanes Oxley, Dodd-Frank, Payment Card Industry (PCI-DSS), Graham-Leach-Bliley (GLB), Health Insurance Portability and Accounting Act (HIPAA), HITECH Act, various state breach laws, and other Federal requirements in certain sectors (FDIC, FTC) are all solid examples of why you need a trusted partner to assist in navigating the regulatory environment. We will help you interpret changes in risk standards within your organization and ensure your company is compliant. **Essextec can help your business bridge the gap between risk and compliance**.
