

Essextec Technology Briefing

Rein in the Data Storm with Next Generation Information Architecture

A perfect storm has been brewing. Data has been growing in volume, in arrival rates, and in variety. At the same time, against the backdrop of this modern data reality, businesses are relying more heavily on ever more sophisticated analytics. How can enterprises operate efficiently while the data storm continues to gain strength?

This new reality poses many challenges that affect all levels of an organization. Data architects are challenged with the realities of dealing with large distributed sets of structured and unstructured data. IT operations teams must deal with new pressures and demands exerted on compute, storage, and network fabrics. Application architects and developers must solve problems of scale and performance across multiple delivery channels as well as fulfill employee and customer expectations. Lastly, security divisions must defend, protect, and ensure data, privacy and security.

Our Offer

Essextec's office of the CTO would like to extend an offer to your organization's technology leadership for a ninety minute briefing. During this briefing will explore the trends and themes that are relevant to today's information rich environments.

Essextec will help your organization explore and review:

- > The role of hybrid cloud in analytics and Next Generation Information Architecture (NGIA)
- > Essextec's reference architecture for big data and analytics platforms
- > Implementation scenarios specific to your organization
- > Roadmaps and journeys towards a viable and sustainable enterprise big data vision
- > Governance and data security considerations and options

Weather the Storm with Essextec's Insight

NGIA is a new requirement that entails revisiting many of the fundamentals of IT infrastructure layers. Essextec can demonstrate the benefits of the modern hybrid cloud and how these benefits can be mapped to your organization and resources.
