

IBM Cloud Resiliency Orchestration

Simplify the management of disaster recovery automation for faster, more cost-effective recovery across hybrid IT environments

Business benefits

- **Speed:** DR automation and testing cuts provisioning time down to minutes for faster recovery time objectives (RTO) and recovery point objectives (RPO)
 - **Scale:** single management dashboard to provision, monitor, validate, and test and report — scales across multiple data centers and supports heterogeneous environments
 - **Simplicity:** application-aware approach reduces the need for extensive expertise and makes it easier to deploy and manage multi-tier recovery for enterprise applications
 - **High value:** offers recovery for enterprise applications that span multiple technologies, helping to meet audit and compliance management requirements
-

What is IBM Cloud Resiliency Orchestration?

IBM Cloud Resiliency Orchestration offers disaster recovery monitoring, reporting, testing and workflow automation capabilities of complex hybrid IT environments in a scalable, easier-to-use solution built on industry standards. The service combines automation and analytics for faster, more cost-effective disaster recovery (DR) to help keep daily business operations running and to proactively avoid disruptions that lead to lost revenue, brand damage and dissatisfied customers.

Why choose IBM Cloud Resiliency Orchestration?

Today's business environment has near-zero tolerance for service outages and disruptions. It can be a difficult balancing act to manage disaster recovery, especially in a dispersed, hybrid IT environment, with cross-platform resource usage, and availability, scalability and performance requirements. IBM Cloud Resiliency Orchestration can simplify disaster recovery automation with real-time disaster recovery readiness validation that can reduce DR test times and disaster recovery failover by up to 80 percent¹, resulting in a more cost-effective disaster recovery experience that is smarter, more tailored and more agile than ever before.

Service highlights

IBM Cloud Resiliency Orchestration offers a unified disaster recovery management approach that delivers real-time disaster recovery readiness validation. The web-based central management dashboard manages all disaster recovery operations — including DR tests, reporting, failover and recovery for physical or virtual systems. Clients can replicate data, applications and operating systems from their production environment to a securely managed service-provider facility, where business applications can failover to a production-ready environment in the event of an outage at their primary facility.

Day-to-day disaster recovery operations covering monitoring and management is performed by IBM Resiliency Services. In the event of a disruption, the client is notified based on their disaster recovery policies and provided with compliance reports via the dashboard.

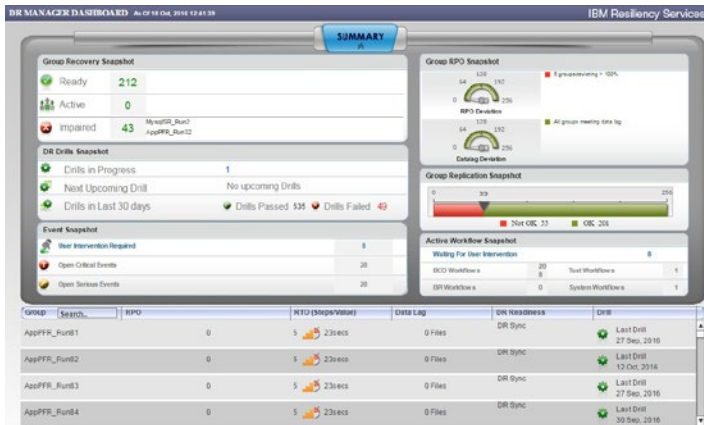

Figure 1: DR Manager dashboard.

The IBM Resiliency Services Disaster Recovery Management (DRM) suite enables DR monitoring, reporting, testing, and work flow automation of complex IT infrastructure and applications. It offers a unified disaster recovery management dashboard that regularly monitors recovery posture by server, application, and business process, validating current DR readiness with clear business and operational advantages.

Service Advantages

With IBM Cloud Resiliency Orchestration, you can be confident about your ability to recover from any outage, either disaster related or infrastructure failure related:

- Automate complex recovery for multi-vendor physical/virtual environments
- Provide real-time insight into application data loss and recovery time
- Detect environment changes that cause recovery failure using dry run capabilities
- Automate redundant, resource-intensive and costly DR processes
- Design recovery workflows to meet service levels and RPOs/RTOs
- Enable global recovery audit reporting and documentation

What is included in the price?

- Simple pricing structure for systems, databases and applications
- One-time installation fee
- Professional services upon request

About IBM Resiliency Services

IBM Resiliency Services offers a broad range of Disaster Recovery as a Service (DRaaS) solutions to help ensure that your systems are security rich, accessible, and always available—no matter where your workload is located—while helping you better manage compliance with federal and local data residency regulations. Our global infrastructure and extensive industry knowledge are designed to make IBM your first choice.
