

Gain agility. Reduce costs. Improve productivity.

Essextec, an award winning IBM Platinum Business Partner, has been serving clients in the northeast since 1994. We have always been an organization that diversifies and aligns itself as the market shifts with new technology. For example, over the past several years we have made two key acquisitions. These acquisitions have allowed us to continue our nimble strategy and deliver best of breed solutions to our clients.

In 2012, Essextec acquired ionRISK, a cybersecurity firm, and in 2015 we acquired the US operations of Gemini Systems, a consultative cognitive and software solutions firm. Both acquisitions have allowed us to continue to adapt to our clients' changing needs and provide Cloud, Cognitive, and Cybersecurity solutions delivered by a team of experienced technology and security experts, business consultants, and industry thought leaders.

Essextec Cloud Offerings

We offer a full suite of cloud services and can assist you in selecting the right model for your business needs – public, private, or hybrid – and develop the right balance of additional services, from network and storage solutions to software and security services.

Our cloud offerings help you build a cloud strategy and achieve your business goals

- > **Cloud:** Infrastructure and Platform as a Service (IaaS, PaaS), Private, Public, and Hybrid solutions leveraging SoftLayer, AWS, and Azure. Consulting services for developing a migration cloud strategy.
- > **Private Cloud Delivery Partner Services:** Colocation and fully managed services for systems, network, storage, and backup
- > **Akamai - Edge Delivery Services:** The world's largest CDN with cloud based firewalls and secure third party application access with a 100% uptime guarantee
- > **Resiliency Services:** Application, database, network, and infrastructure recovery services for disaster recovery
- > **Remote Managed Services:** Managed services for infrastructure located on premise or a third party location
- > **Managed Security Services:** Managed services for unified threat management devices, SIEM, penetration/intrusion detection, and remediation professional services
- > **Managed Mobility Services:** Wireless network management, mobile device management, MaaS360, Security and Integration services
