

# Your business demands a lot from you You need the same from your infrastructure

## Maximize flexibility, manage risk, and accelerate growth with the right infrastructure

Every year, your business expects more from information technology. Not only are you challenged with reducing costs and improving efficiency, you need an infrastructure that allows your business to be flexible and agile to meet those demands. Virtualization, optimization, energy stewardship, and flexible sourcing can help you contain operational costs and complexity so you can achieve breakthrough productivity. With data constantly changing and growing, we can enable a smarter and secure infrastructure for you to manage the ever changing demands of resiliency and compliance.

Whether you need to simply ensure performance for your systems or if you are challenged to break down technology silos and reduce IT sprawl with a converged infrastructure, our tailored solutions will align your IT assets to support your overall goals.

Using proven best practices, many of our solutions start with enterprise tested and integrated technologies from leading vendors that can fit your unique needs and budget, regardless of company size. Our solutions are proven in some of the most demanding environments so our team is prepared to effectively design and implement the best infrastructure solution for your business environment.

## Reliable Options to Simplify your Infrastructure and Improve Your Organization

IT Asset Utilization

Response Time

Availability & Resiliency

Agility & Scalability

# Solutions that simplify information technology and enhance your business

Server and storage consolidation solutions improve efficiency and minimize maintenance costs – so you can do more with less.

## Virtualization

- > Reduce capital outlays using fewer physical servers
- > Shrink server energy consumption and reclaim floor space
- > Simplify maintenance and management tasks
- > Improve reliability and availability

## Provisioning

- > Elevate operational flexibility
- > Allocate and right size resources
- > Optimize storage utilization and improve performance

## Storage

- > Manage growth
- > Manage data
- > Improve compliance and ensure data security
- > Enable business continuity and establish efficient backup and recovery

Combining servers, storage, networking, and management into a converged platform reduces your footprint, complexity, and cost and helps you simplify and speed deployment.

Using proven best practices, many of our solutions start with enterprise tested and integrated technologies from leading vendors that can fit your unique needs and budget, regardless of company size. Our solutions are proven in some of the most demanding environments so our team is prepared to effectively design and implement the best infrastructure solution for your business environment.

## Future Proof your Infrastructure. Today.

The world is not slowing down. Neither is your business. Working with Essextec will help ensure you are prepared to keep up. Our integrated solutions will give you confidence that your infrastructure is flexible, secure, and seamless. We can also optimize your cloud delivery solutions, ensuring you have a consolidated footprint, reduce your costs and response time, while enhancing productivity and mobility.
