

Information Security Assessment Offerings

The frequency, severity, and diversity of cyber threats continue to grow each year and many organizations still have gaps in their defense strategy, leaving them ill prepared to respond.

Essextec Information Security Assessments can help you gain a holistic view of your organization's security posture. Unlike simple penetration tests, our engagements simulate real world attack patterns and evaluate your organization's people, processes, and technology. We have a 100% rate of success in identifying vulnerabilities such as:

- Misconfigured systems and software
- Inability to monitor user activity in networks
- Incongruent policies and procedures leading to non-compliance
- Outdated operating systems and patch levels
- Employees not properly trained or unaware of emerging approaches

ADVERSARIAL SIMULATION ASSESSMENT

Understand your potential exposure to external threats through a multi-vector simulated attack which includes both technology and human factors. Discover where gaps exist within your organization and IT environment. This assessment is a "true to life" view of your threat surface.

Adversarial Simulation Assessment Services

- > **Vulnerability Assessment**
Complete scan of systems for patch levels that are out of compliance or need to be updated, and other vulnerabilities
- > **Penetration Testing**
Infiltrate vulnerabilities to verify their existence and potential impact
- > **Social Engineering**
Experts simulate the most common and successful approach to infiltrate systems

INFORMATION SECURITY RISK ASSESSMENT

Enable your organization to quickly identify and respond to breaches and attacks, mitigating the potential risk of loss. Become confident that your defenses are optimized and your organization is prepared to respond quickly to threats.

Information Security Risk Assessment Services

- > These services include all **Adversarial Simulation Assessment** services, *plus* the additional offerings listed below
- > **Organizational Assessment**
Interview personnel, review policies and procedures, assess compliance
- > **Security Awareness Training**
Create and administer training program including specific metrics needed for trend analysis
- > **Security Posture Review**
Analyze gaps in security controls relative to recent breaches
