

BUSINESSES OF ALL SIZES NEED TO THINK ABOUT SECURITY

Running a business comes with a certain amount of risk. In today's ever-changing business environment, it is impossible for any one person to keep up.

This is never more true as it pertains to cybersecurity. In recent years cybersecurity has rapidly made its way downstream to the point that more than 61% of small to medium businesses (SMB) have been breached in the last 12 months¹ - a 6% increase from the previous year. Cybersecurity professionals are both expensive and difficult to find. Essextec has simplified the process.

SIMPLIFIED, EFFECTIVE, AFFORDABLE

Based on our experience, Essextec has developed a set of packaged cybersecurity offerings designed to take your business to the next level of security. Keeping in mind the budget of an SMB, these offerings are a combination of easy to use technologies and recommendations from our cybersecurity experts.

Our unique approach uses security as a business enabler to help your business grow while keeping it secure. Take advantage of one of our pre-built offerings or leverage our team to design a unique set of affordable technologies and services for your business.
