Essextec Virtual CISO Services provide a Strategic Direction

Essextec Virtual CISO Services identify security concerns of existing infrastructure. Our objective third party view evaluates the adequacy and effectiveness of required controls that are established to protect the integrity, availability, and confidentiality of client information resources. We then provide clients with a strategic direction to address risk, compliance, and security concerns based the expert, independent, and unbiased evaluations. This strategic direction provides a clear security timeline, aligns with industry best practices, and may include:

Develop

A CONVERGE COMPANY

CLOUD | COGNITIVE | CYBERSECURITY

A TARGETED APPROACH

Using a targeted approach, we determine the vulnerabilities in existing security policies and controls. After reviews of current security processes, internal controls, and sensitive information locations, we can identify areas where policies and processes are lacking and help establish an effective strategy.

A Targeted Review of Policies and Processes

Physical computer security policies regarding physical access controls

Network security policies and procedures

Data security policies and procedures

Contingency and disaster recovery plans and testing

Information security awareness and training

Information security management and coordination policies

Additionally, Essectec will be able to measure internal information security risk and incident response program efficacy utilizing table-top exercises and penetration testing as the organization's information security framework matures.
